MedSource I.V. Infusion

TrueSafe™ Safety I.V. Catheter

Rapid Flash Back Needle
The notched needle **featured in sizes 20g-24g** allows for catheter blood flash observation, before blood reaches the flash chamber.

Our Safety I. V. Catheter is designed to reduce hit-and-miss insertion attempts by immediately confirming vessel entry, enabling you to stay focused on the insertion site. The design features a notched needle which allows for catheter blood flash observation; incorporated into gauge sizes 20g - 24g. After threading, with the press of a button, the needle instantly retracts into the barrel chamber helping reduce accidental needle sticks and making sharps disposal easier.

Features:

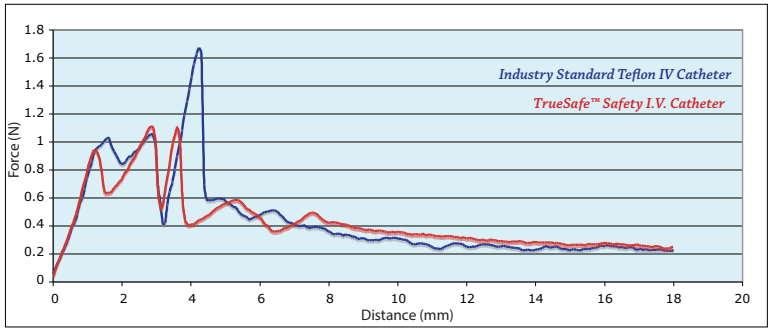

- Fully encapsulating needle shield with push button activation
- Notched needle in sizes 20g - 24g
- Contoured housing and ergonomically designed thumb grip
- Gently tapered catheter tip
- Large-volume chamber

Benefits:

- Designed to help healthcare workers as well as hospital waste handlers from exposure to blood borne pathogens via needlestick injuries.
- Catheter blood observation before blood reaches flash chamber.
- Allows for a variety of user techniques to aid insertion.
- Provides smooth transition from needle to catheter.
- Allows clear visual confirmation through flashback and easy handling.

Specification: TrueSafe™ Safety I.V. Catheter

- Catheter Manufactured With PTFE
- Siliconised Polished Stainless Steel Needle
- Rapid Flashback Notched Needle
- Smooth surface for easy catheter insertion and advancement.
- Sharp needle technology provides both ease of penetration and improved patient comfort during cannulation.
- Available on sizes 20g - 24g

Needle Penetration Comparison
When compared to the industry standard I.V. Catheter, the MedSource Safety I.V. Catheter out performs in comfort and gives a less painful needle insertion.
